1. FOOD DELIVERY WEBSITE (YUMFAST DELIVERY)

1. The Food delivery project must deliver a fundamental of better food transfer in a reliable way to the user.
2. The essential part is to achieve a requirement of a user to give them satiety according to their need.
3. The Food delivery websites can help the new business started in trend to achieve a great hype in a market and to stand in the market.
4. Sometimes there might be a chance of reducing the strength of delivery application due to the improper choices so in this project, I just try to keep more choices to the user by including the partitions of food.
5. Has there so many websites for delivery of food but just try to keep it simple stupid is the little way to achieve a project early.
6. The food delivery project can help to give a dummy web page to add into a real time web application to show some interest.
7. May be the project is too short in the way, but it can help to dealing with food orders and basic needs of user.
8. My project includes some pages or web pages to achieve a basic need to order a food and can help to user connect.
9. In addition, I just kept a review of some dummy users to show the more interest of people in this project or site.
10. There is the page to keep the information of user as a part of sign up which hold some data to easily connect with the user again.
11. Some pages can show the information regarding website or food delivery site as a YUMFAST DELIVERY [ABOUT US] page to give idea about a website.
12. Maintaining a simplicity in a website is essential which can be handled by the user easily, so I just keep pages as a user friendly and easy to handle.
13. In the end their may some application where people can join and check for the future updates for their conveniences.
14. Their where so many delicious and yummy food images with their prices and some information regarding them may insure people and attract to buy it.
15. Also, the cart is their which can provide an order set to the user to take their order into in a cart for the future use, and to generate the interest into another orders with respect to the previous one.

2. INTRODUCTION (WEB DEVLOPMENT)

1. Web development is the best way to achieve this project in terms to gain knowledge regarding website.
2. How to create a website by using a web language and gather a data to achieve a module is the way to integrate them and make a final product.
3. Web devolvement can help the programmer to make a different web page over a chrome browsers and Firefox to generate the application task and give idea over a social media.
4. Web development has a front end to user friendly interface communication and build up foe the graphics of the websites.
5. Mostly web pages can use a HTTP protocol to transfer the data modules or packets into a network.
6. Uses a HTML language with respect to CSS and JAVASCRPITING to make an innovative web page.
7. Web development can help programmers to enhance the ability of creativeness of web pages.
8. The given project is the part of web development to enhance the creative and innovative ideas regarding social sites.
9. There is so many tags, attributes, selectors in the HTML language like library of any languages.
10. That may help to make our website easily and useful for almost every web user to achieve a http form of websites.
11. Web development can easiest way to maintain and modify social web sites to achieve the market target.
12. It includes so many web designers which will work for front end development to make a website attractive and simple as well.
13. Web development can increase in a wide range of real time scenario to make a better way to store the user data for specific credential.
14. So many security concerns regarding web pages so they might be providing the security in terms of protocol networking.
15. The web development become a new interest for the nowadays generation in area of full stack development.

3. PURPOSE

1. Firstly, it's based on deliver the food item directly at the home of user which helps people to wasting their time to go and buy something.
2. The main purpose of this website to help people to find a best food and just buy by their choice and order it with the fast delivery.
3. Sometimes some web pages need so many data from user to keep them in touch but there might be no need of so many data so only the sign in is essential.
4. This project can give people to select choice as different way as some new offer by this new site.
5. To create an interest into a people about to order a food from this site and just it fast or in time.
6. The customer can save their time to selecting items in the restaurants and shops which is so good.
7. So, in the era or fast world they need safe order as well as reliable one for themselves which cannot harm their body.
8. For this reason, this app can help people to connect with us and help new food business market traders to use this cheap website.
9. The site is not more complex user can use easily also the old age people can also handle it easily.
10. Such a way to make an easy and simple food delivery website this project can includes so many modules which will takes lot pf time to build but give the reliable output or a website for food delivery.
11. In a manner to adjust number of food items to give so many varieties to the foodie people and according to their preferences.
12. Food is in demand day to day life there were so many categories of item, but people want the simplest way according to their need.
13. So, for giving them a best poorest way to choose some of the items and just order it is the way to proceed the project.
14. There are some terms and condition which will give by the website.
15. It will be the best version if some of the extra features as added into it which modify the food delivery site and increase the worth by using the reviews page.

4. PROJECT OVERVIEW

1. The project is made up of to deliver the best food item according to the user choice and with respect to their convenience.
2. So, for ordering the item sometimes they need to register over a site so there is part of sign in into a project site.
3. Cart is already taken for add the food product into a site and store it for the future order or order now.
4. Along with the most people they can help to give tracking the order which is the part of backend and that may increase the site flexibility.
5. The time-consuming site for load can reduce by some meta body into website to assure that the authorized website or legal websites.
6. Account management can be a part of database management in the web development as it is including only working on front end development.
7. So many structures into a CSS, JAVSCRIPT can helps to make corrected data and graphics.
8. Food delivery need the people appreciation by giving the stars and rating so for this the site can include some data show the reviews.
9. There were this is an only front-end based project so it doesn't take up large time but also it can include some modules which is complicated to do.
10. Some of the modules that given the more and more information regarding variety of item with the help of categorization.
11. The project overview can describe the overall efforts to take up into a project which will be usable in future projects.
12. This site can become an easiest food choosing item for customer are order it to buy early as possible.
13. In the trending era web developer can use it as a small rage of project for ask their stakeholder for changes.
14. Wide range of people don't want to waste their energy on the physically ongoing, so it helps into it too.
15. In the end there is communication media for connecting with customers in another applications.

5. REQUIREMNET GATHRING

1. Requirement gathering is a part of communication between customer and web developer to create a particular site.
2. Food delivery site needs so many things as follows and it can be the best option to gather requirement early in project.
3. May be the firstly people check out or asking people about site it is reliable or not so there should have review page that shows the interest of people into in our website to give the legality of site.
4. Also, for more security give the terms and conditions page which is needed in any bad things happen in payments or food items delivery.
5. Food delivery web page can need no. of variety in a web site which can improves or increase the interest to order the more food items.
6. To save the product for new order is the better way to give the user experience and give them a best food item over there.
7. It's a way of survey which can needed to deliver the project as user needs and for fulfilling the user requirements.
8. It required the so many users needed authorities to store their data in an authorized way and protect them by any technology.
9. It will be the part of shoeing new schemes to buy our product with discounts and make it beneficial for customers.
10. After the complete working people can give the reviews or any dislike and likes on site to give the proper feedback.
11. It is to make it simple for future used in this AI generation which can need to give track on what kind of food items liked by specific customer.
12. Keeping our website updated as user requirements will change so be ready for it is necessary in upcoming.
13. In this project including only the essential elements that will give little bit idea about what kind of site is to be made up of.
14. So, requirement gathering is plays an important role in this project so which kind of technology will be needed and how it works.
15. Maintaining all the pages is a way to accordance or in way to user can handle it easily so linking is done too.

6. DESIGNING

1. Into a part of design and development just investing most of the time and create a site in such manner to include the essential element.
2. It includes such a part of user interface called UI which can be generated into an HTML language and just make a front interface.
3. Includes number of linked attributed which can control the flow of user and make it user friendly.
4. Into that there were some frameworks with using a JAVASCRIPT to achieve a form for filing the customer data.
5. Using the CSS style to manage the padding, margin, text-align and so many things which are needed for make the site interface properly.
6. Using a div tags to make the number of divisions and create a container box to keep the data carefully in a manner that user can access and see perfectly.
7. It's a process of developing a dummy model of project and gathering the data about what will be usable things into the projects.
8. Project must take under tracking to do so many into a single page, so we must make so many pages.
9. After that we must integrate this all pages to make our final product and give to the customer.
10. Is such way that designing should be done, after a considering all the data modules in one part and then work will start to development.
11. Before starting their must be one overview of design is needed to proceed the project and similarly keep changes if needed.
12. After development its almost critical change from base so into a part of designing take the information of each attribute must need.
13. Along with the attributes there are some functions, folders, file, lots of data. To maintain this, use a particular software.
14. Software should be like which able to include a whole data into it which help to further changes and quick modification.
15. Just like into this project Visual Studio is in use for the basic front end web development program.

7. FEATURES AND SPECIFICATIONS

1. Main functioning of this website to give information about fast food delivery with the carefulness.
2. Includes some categories for vegan people who always hesitate and avoid the fast food due to the unwanted issue.
3. So, for recovery on this I applied a scheme to categories the part into vegetarian and non-vegetarian people to clarify them.
4. There might be a sign-up page for the people who can enjoy food items and want more item and select our site as a default for always choosing the food items.
5. Sometimes people want discount so applied a new offer from this website to give back the attention on people.
6. There are some food items images are taken for attracting people to buy a new and fresh food from this website.
7. Just for fun their and more information added up the scrolling cursor, get attracted people as a user interface perfection.
8. In such a manner there are so many divisions and buttons from which people can know more about website.
9. For the verification there are term and conditions policy, verified certifications and so many things are added up.
10. There were so many tags and attributes are used into it for the creation of this website which helps to make it perfect.
11. Number of dimensions and colors to attract the customer viewpoint about this website and increase the simplicity.
12. Essential elements are added up which is needed for front end where user can access the web data and search for it.
13. Because of some meta link our site should access and authorized by user to increase the rate of communication.
14. Some of the things like table and tag are used to add a data into website for show it in a particular format.
15. Using some styles to increase the visualization or better visualization with highlighting them as a user visualization part.

8. TECHNOLOGY USED

1. Websites are nothing but the part of the web-development which can include frontend, backend, mildened.
2. Front-end development the basic of this project which can done by using a HTML language.
3. Into an HTML language there is so many tags, attributes which we used into it to shows some of the part.
4. There is hyper text markup language is the way of using hypertext transfer protocol which can transfer the data packets and make the address for site.
5. In those way by using the HTML language we create a food delivery file and integrate all the pages into it to make an appropriate website.
6. As per the requirement we use the next technology that is nothing but CSS.
7. CSS helps to store the classes and data regarding that classes which can make the dimension of classes box.
8. CSS is the best way to use a module of class or so many styles into another file and access it.
9. For accessing a CSS file, we can generate a linker to link a html file to the CSS file.
10. There were so many classes inro an CSS file we can store in format to make a margin, padding, text-align etc.
11. There are one more think which we used as a framework, or we can say that the thing to achieve the complex data.
12. Complex data modules can only be achieved by complex language and that can be build up by JAVASCRPTING.
13. Scripting is very hard to understand but help to generate our link complex data as a form maker which can need so many functions.
14. JavaScript is basically used in afunctional language to give the functional instruction for the specific function.
15. In such manner by using a HTML, CSS, JAVASCRIPT we made up a food delivery website to give advantages of it to customer.

9. PROS OF THE PROJECT

1. Many people or developer want the simple site at the early stages into a market, so it gives a high simplicity.
2. No more redundant and complex data should be included into website which can confuse the customer.
3. Includes all the essential element to deliver a basic food delivery site needs or to fulfill customer satiety.
4. Social media platform which can give a better user interface with low complex data modules.
5. It is so cheaper as compared to other websites as a dummy model in the market strategies.
6. It can easily modifiable it means it has a high rate of flexibility too moderate any time and give an appropriate output.
7. Food delivery site need a so many varieties and categories into it so there is also a categorized part for the customer.
8. Data from user is already done in the part of sign in which can increase the awareness of website into customers.
9. The reliability take place by some reviews which can include some rating star by so many users.
10. Via communication by other application or nothing but promoting part are included into it.
11. The passive interaction can be done by the review pages with customer to know the different point of views of customers.
12. So many terms and conditions are there which can gives the authorization of organization and food delivery project.
13. It is the vital part of the website which show the reliability of the websites which can need by all market traders.
14. In such a way by using all the above content, made up of dummy food delivery website to achieve a base of the website.
15. Contains all the important pages which can hold the data related all food items and add it into a cart.

10. CONS OF THE PROJECT

1. It is a normal frontend website which can give only the user interface into it with includes the information.
2. That information regarding food items so there is no more complex data or any number of complex varieties.
3. Its not deal with the complex data because it does not include the middle of the website as a database handler.
4. It shoes only the specific number of food items and just add it into a card there is no backend functionalities are to be added.
5. Due to some reasons the site needs little bit changes to add more pages into it by the developer, so they need to work it on more.
6. It's not compatible with other websites but developer can access the small modules to create new things.
7. This project doesn't have a payment mode which is nothing but the backend process and that may need more experience.
8. This project also doesn't have tracking system which need more complex functionalities into a source code.
9. Complex source code which does not understandable easily by the user side and no more security.
10. Due to absence of database, there were no storage of customer data as a middle ware process into in website development.
11. Not more flexible and don't give the high efficiency for the upcoming trends about food delivery websites.
12. Has a low-rate tags and method which can just generate the user interface but where customer must open it into specific software.
13. It is adjustable only in laptop or desktop devices its means there is need of so many configurations.
14. It is not ready for the market strategies due to lack of backend developments.
15. Lack of unproper and unorders set of data modules and pages which elaborate only the structure of user interface.

11. FUTURE RESEARCH

1. Future research can include the future predictions or modules that should be added into the food delivery project.
2. Need a database which can store the data which given by the user or customer into the food delivery website.
3. Sorting the data modules is necessary to perform the control flow into this food delivery website.
4. To perform a high-level instruction, need a backend development.
5. That may include the tracking method which is most efficient way to deliver the item as quick as possible.
6. Perfect payment mode is also needed otherwise for cash on delivery option is also needed into the site.
7. Searching an appropriate restaurant is also needed to elaborate the delivery area and food from people want to eat.
8. Nowadays AI is also trying to give recommendation system into a website development strategy.
9. Recommendation strategies must add into it to knows what people want in future to know early.
10. In such a manner into a future this project can become a real-world website to store the data.
11. To modification there is a repository for existing pages and data modules which help in future to modify.
12. Some reusable components can be also taken for the improve the efficiency of the new project regarding food delivery site.
13. Its need a so many datasets by using another language excluding HTML.
14. Like using a PHP, java, python that may increase the complexity of the websites but give the appropriate functionalities.
15. Is the way to make this website more and more useful we must work on it as a real time entity set.

12. ELEMENTS USED INTO PROJECTS

1. Html tag which is most important to make a web page and give it a as address to open it on nay browser.
2. Head tag to give the headings with respect to highlight the page information in a range of 1 to 6.
3. Title tag is the most efficient way to add the title of the web page to known by user that specific use of that web page.
4. Meta tag for achieving the interaction into a social media with the customers and user to promote this site.
5. Style sheet is nothing but the part of CSS file, but we can also add it into a html file, so we use this tag.
6. Script also the part of linking our page with the JAVASCRIPT instructions and methodologies.
7. Class is the part to access the CSS style sheet by calling the class and include their attribute into the class type.
8. Link tag is essential for the taking place of control flow and link the ultimate web pages with together.
9. Functions can be called by JAVASCRIPT and access the instruction and the methods into it.
10. Extensions are the way to achieve the file format and give the accessibility of that file in way of calling.
11. Br tag for break the statements according to the user need.
12. Bold tag can be the part of font large element to highlight the data or a specific important data into a big paragraph.
13. Image tag is an essential element to add the images into a website and, we can extend the height and weight with respect to this tag.
14. HR tag to divide the section or break the section to shows the more properness into a website.
15. So many elements are added into this project with respect to above elements to make a real-world food delivery website on the social media.

13. FLOW OF THE PROJECT

1. Number of flexes which shows the linking pages and that may help the customer to show the proper information in the better way.
2. The scrolling cursor shows the information regarding new offer and services given by the YUMFAST DELIVERY SITE.
3. Next section belongs to sign up page for the customer to give their information into the delivery website,
4. Also, it has a submit button which can submit the page and go back to the home page to show succession of sign up.
5. At the end of the front interface there is a logo image of YUMFAST web application to promote it.
6. Next terms added to show connect via WhatsApp, Pinterest, Instagram, contact and on the YouTube channel.
7. Thank you, image shows the respect to the customer from this site, and please do visit gain formalities.
8. Into the about page there is the about section related this site and the information people can read to get interest into the site.
9. For the back from this there is also a back to home button added into every web linked page to easily back to home page.
10. Sign up page can already add to the home page so customer can sign up only on the current home page.
11. There are so many new offer items which offered by the YUMFAST FOOD DELIVERY website.
12. Into it the section of pure veg and non-veg which shows the categorization of the best and safe foods.
13. The pure-veg page can only be the part for vegans who don’t need a flesh and meats into their meal.
14. Non-veg people can buy their food from their section and add it to the cart for the future use and for complete the order.
15. Terms and condition pages for reliability of site and review page for shows the reviews from other users.

ABOUT YUMFAST
C:/Users/ASUS/Desktop/coincent/Food%20Delivery%20Project/about.html
————ABOUT US PAGE————
Welcome to our Food Application! At [YUMFAST DELIVERY], we're passionate about good food and bringing people together through delightful dining experiences. Our mission is to simplify the way you explore, order, and enjoy food from the comfort of your own home or wherever you may be. Who We Are: We are a dedicated team of food enthusiasts and tech experts who believe that food should be both a pleasure and a convenience. Our team includes talented chefs, food critics, and developers who work tirelessly to ensure that our platform offers the best culinary options and an exceptional user experience. What We Do: Our food application is designed to revolutionize the way you discover and interact with local restaurants, cafes, and food establishments. We provide a seamless platform that connects you with a vast array of dining options, from popular favorites to hidden gems, all at your fingertips. Features: Extensive Restaurant Directory: Our application boasts an extensive directory of restaurants, cafes, food trucks, and more. Whether you're craving Italian cuisine, sushi, or vegan options, you can easily find the perfect spot that suits your taste buds and dietary preferences. Seamless Ordering: With just a few taps, you can effortlessly browse menus, customize your orders, and place them for pickup or delivery. We collaborate directly with our partner establishments to ensure that your food arrives fresh and on time. User Reviews and Ratings: We understand the importance of honest feedback. That's why we provide a platform for customers to leave reviews and ratings, helping you make informed decisions about where to dine or order from. You can also contribute to the community by sharing your own experiences and recommendations. Personalized Recommendations: Our intelligent recommendation system learns your preferences over time, making it easier than ever to discover new dining experiences. Whether you're looking for a romantic date spot, a family-friendly restaurant, or a trendy brunch location, we've got you covered. Special Offers and Discounts: We partner with local establishments to bring you exclusive deals, discounts, and promotional offers. You can enjoy savings on your favorite meals and discover new places without breaking the bank.
Our Commitment: We are committed to providing a user-friendly, reliable, and secure platform that enhances your food journey. We value your privacy and employ robust security measures to protect your personal information. Our customer support team is always ready to assist you with any queries or concerns you may have. Join [Application Name] today and embark on a culinary adventure from the comfort of your own home. Whether you're a food lover, a busy professional, or simply seeking convenience, we're here to satisfy your cravings and elevate your dining experience. Download the app now and let us bring the world of flavors to your doorstep!
[YUMFAST DELIVERY] - Feed Your Foodie Soul.

LAXMI TUMSARE
This app is a game-changer when it comes to food delivery. The user interface is intuitive and easy to navigate. I love how I can browse through multiple restaurants, check their menus, and place orders seamlessly. The delivery time is usually accurate, and the food arrives hot and fresh. The app also offers great deals and discounts, making it even more appealing. Highly recommended!" This app is a game-changer when it comes to food delivery. The user interface is intuitive and easy to navigate. I love how I can browse through multiple restaurants, check their menus, and place orders seamlessly. The delivery time is usually accurate, and the food arrives hot and fresh. The app also offers great deals and discounts, making it even more appealing. Highly recommended!" This app is a game-changer when it comes to food delivery. The user interface is intuitive and easy to navigate. I love how I can browse through multiple restaurants, check their menus, and place orders seamlessly. The delivery time is usually accurate, and the food arrives hot and fresh. 15. TESTING

1. It includes the testing of the website to check weather all classes are performing their task or note.
2. Include the monkey testing methodology to accept the complexity of pages and give the proper feedback.
3. Also test it on the inspect mode that may need to be more modification into a source code for better interface.
4. Also, to check it as user friendly or not for that give it to another person to use and check it by themself.
5. Checking by yourself including the knowledge about control flow and is that easy to understand or not.
6. Complexity may vary during the testing according to carries from user to user which can shows the compatibility.
7. Check for the proper efficiency and flexibility of the website for to make sure about handle in future.
8. Solving the existing problem and make it usable for the future use is the better way to reduce the time.
9. Redundant data should be tested and need to confirm that it does not increase the complexity or space of the source code.
10. Reliability that web pages a site should not harm or affected to the user interface by any other malwares.
11. Security may be considered as a protocol and so many firewalls needed to be added into our social media site.
12. By using the meta links that we can add the contains and description for texting that is our site can be the interest of users.
13. Also, the rest of source code that varies again and again so test it with existing file make it clearer.
14. Complete site can be the part of final Food delivery website which gives the proper user interface.
15. In such a manner testing is need ed to add into this project that all modules are integrated perfectly or not.

16. CONCLUSION

1. From this project we learn so many things like how to create a HTML file to connect with web page.
2. Controlling the web via div tags and so many classes and other elements which can shows the user interaction part.
3. Gain knowledge about CSS files which help to modify the graphical interface and achieve the flexibility.
4. Also, there are style classes includes number of elements into it as a considering the elements of padding, margin, height, column so on.
5. Selectors are to format the selecting data and highlighting it to shoes some important information to the user.
6. There were some labels to labelling our site and give the more clear view to the site for better understanding of the user.
7. Understanding about JavaScript as part to include so many functions with respect to instructions and methods.
8. At the end how to integrate all the web pages and make it as a whole web page site and how to deal with complex source code.
9. Gives an idea about front end web development as abase of the web development or full stack development.
10. It helps to applying so many contents to add on to make proper web site according to the market trends.
11. Team collaboration things are needed and what should do into it and how to track it can easily understandable.
12. So many things about grid, form, labels, marking, animation, creation and so on can be the part of this program.
13. That help use to gain some knowledge about how to deal with web development creation and innovation of new things.
14. Such a huge and precious experience is taken from this project which helps into a future development.
15. It’s a pleasure working on this project which helps to increase the confidence about web development successfully.

17. REFERENCE

1. From team **COINCENT**, it helps to give required knowledge from learning management to give a rough idea about web development.
2. Also, into a program to make a site project and creation of website helps to achieve a creation of new project.
3. **BOOTSTRAP V5.0** useful for the innovating and get the existing data modules into the project.
4. It helps to reduce time consumption with respect to increase the more creative user interface.
5. **CDNJS.COM** for simple and fast content delivery to proceed the project with new creations into site.
6. For the use of react.js modules into a simple project that CDNJS.com help to include into the project.
7. **OWL CAROUSEAL2** for the demo of the carousel of number of images to scroll and shoes the new view.
8. Scrolling images and the information can increase the interest of the user and reduce space consumption.
9. **CODE WITH HARRY.COM** approach to learn new things which added into project and give the more creative view.
10. Help to make a form or sign up from using the JavaScript and then also for the verification and error handler.
11. Learning from the YouTube is also the best way and give some new ideas about the web creation.
12. ChatGPT also helps to know more information about which tag is suitable for specific use into site.
13. For the integration part there is a chrome, web browsers to give the source code information.
14. Referring some websites to get an idea about the view or user interface view for the food delivery website.
15. By referring above links and webpages this project is performed properly.
